

IN THE CLAIMS

1. (Original) A method comprising the steps of:

monitoring a first device by a second device;

determining, by the second device, whether a current device driver in the first device
is a desired device driver; and

first transferring the desired device driver from the second device to the first device
when it is determined that the current device driver in the first device is different from the
desired device driver, where the current device driver and the desired device driver are
configured to control operations of the first device.

2-30. (Canceled)
